

PLANTING TIPS

Large, deciduous trees planted on the south and west sides of your home will provide cooling shade in the summer, and when the leaves fall off, allow warm sunlight to enter your home during the winter.

Take these steps to increase the efficiency of your heating and cooling system.

- Tree species with round, horizontal oval and vase-shaped crowns when mature offer the best shading potential.
- High, wide-crowned deciduous trees provide the best shade.
- Always consider the ultimate size of the tree when choosing the type of tree to plant.
- Before digging, always remember to call a locating service (such as Diggers Hotline).
- Trees should be planted 25 to 35 feet from the area to be shaded.
- Do not plant trees near underground pipelines or wires, septic tanks or overhead utility lines.
- Do not plant a large tree closer than 5 feet from a driveway or sidewalk; it could eventually push up the concrete.
- Do plant trees to shade roofs, windows, porches, air conditioning units or other areas of heat gain.

OTHER BENEFITS OF TREES

- Improve the appearance of the home
- Divide grounds into several use areas
- Help absorb noise
- Serve as natural air filters
- Provide privacy and protection
- Serve as windbreaks
